DocinVault stands at the forefront of identity verification in an increasingly digital world. Its configurable identity-verification platform supports a broad range of use cases involving identity documents across nearly all global jurisdictions.

This document is a detailed guide to the identity documents supported by the DocinVault Identity Verification system, organized by country or territory and document type. The list is extensive but not exhaustive. It is continuously expanded and updated to help customers understand which documents the AI-powered system recognizes automatically and which geographic regions are covered.

DocinVault is committed to reliable and efficient identity verification tailored to the evolving operational and regulatory needs of its customers.

Disclaimer: This supported-document list is provided by DocinVault LLC for informational purposes. DocinVault makes reasonable efforts to maintain its accuracy and completeness, but document acceptance may vary according to regulation, system updates, capture quality, and customer configuration. A listed document is not guaranteed to be accepted or verified in every workflow. Contact a DocinVault representative for current deployment-specific coverage. DocinVault LLC assumes no liability for errors, omissions, or changes in document-verification capabilities except where liability cannot lawfully be excluded.

SECURITY MEASURES

METHOD	DESCRIPTION
Font Verification	This security measure involves checking the typeface used in documents or IDs to ensure it matches the standard fonts designated for official use. Variations in font style, size, or alignment can indicate tampering or forgery.
Holograms/Water mark Authentication	Holograms are reflective images or patterns used in security-sensitive documents and products. Their authenticity is verified by observing the changes in the hologram image or pattern when viewed from different angles, ensuring they are not counterfeit.
Template Matching	This involves comparing a document or ID against a predefined template to ensure all design elements, including layout, font, graphics, and security features, align precisely with the official standard.
MRZ (Machine Readable Zone) Checksum Verification	This security check involves validating the checksum in the MRZ of passports or IDs. The MRZ usually includes encoded personal data, and the checksum helps in detecting errors or alterations in the encoded information.
Field Comparison	This measure includes comparing specific fields of information on a document (like name, date of birth, issue date) with VIZ or databases to ensure consistency and accuracy.
Front/Back Verification	This security measure entails a thorough comparison of the front and back sides of a document. It ensures that both sides align correctly in terms of design, information layout, and security features. This is especially important for documents with critical security elements or information printed on both sides. Discrepancies between the two sides can indicate tampering, alteration, or forgery.

SECURITY STANDARDS

CERTIFICATION	DESCRIPTION
IBETA Level 2	IBETA Level 2 is an advanced standard under ISO/IEC 30107-3 for evaluating biometric security systems against sophisticated spoofing, such as 3D mask attacks. This level requires a higher budget for simulations and advanced equipment, with a strict 1% penetration rate criterion. iBeta Quality Assurance evaluates, accredited by NIST/NVLAP, FIDO Alliance, and Android, ensuring accurate biometric distinction.
ISO 27001	ISO 27001 is an international standard for managing information security. It outlines a framework for establishing, implementing, maintaining, and continually improving an information security management system (ISMS). This certification is critical as it demonstrates a commitment to protecting sensitive company and customer information.
SOC2	SOC2 is a framework for securing customer data, focusing on security, availability, processing integrity, confidentiality, and privacy. Based on AICPA's Trust Services Criteria, it's crucial for software and cloud firms. SOC2 has two report types: Type I assesses system design, and Type II evaluates operational effectiveness. SOC2 compliance builds client trust via audits verifying adherence to trust principles.
GDPR	The General Data Protection Regulation (GDPR) is a regulation in EU law on data protection and privacy in the European Union and the European Economic Area. It also addresses the transfer of personal data outside the EU and EEA areas. GDPR compliance is crucial for companies operating in or dealing with customers from the EU, as it sets strict guidelines for data privacy and security.
